

THINGS TO KNOW:

1. Lab report must contain following sections: (order must be maintained)
 - a) Title /Question
 - b) Theory: The brief overview of the concept /techniques/syntax/technology used in the program.
 - c) Code: The complete code (markups, styles and scripts)
 - d) Output: Screenshot of the output (in console and/or browser window)
2. Output screen should be captured (use snipping tool), printed and attached in the report. Other contents must be handwritten.
3. Every source code must include the printing statements to print following information after your main output:

Lab No.:

Name:

Roll No./Section:

4. Contents should be written on single side of A4 sized paper.
5. The works must be submitted within specified deadline.
6. Cover page and index page should be attached in the report appropriately.

Index Page Format (can be printed)

List of Lab Works

Lab No.	Title /Question	Submission Date	Signature	Remarks
1(a)	This is sample	2079/11/12		
1(b)	This is also sample	2078/11/12		

Sample Output: (must be readable, showing browser address bar or console window menus)

[Lab reports after deadline will not be accepted. If you have any genuine reasons for not doing tasks in time inform the instructor before deadline!]

Scripting Language / BCA – 4th Semester Lab Works (Part-3)

19. Some basic PHP programs

- Create a html form to take two numbers form text fields and display the multiplication table of bigger number using PHP.
- Create a html form to take two numbers form text fields and an operator (among +, -, *, /, %) from combo box and display the result on a label when user press a submit button by using switch-case-default syntax in PHP.
- Write a PHP program to demonstrate different ways to create arrays and display them using `var_dump()` and `print_r()` functions.
- Write a PHP program containing associative array and illustrate the use of for loop and foreach loop in accessing arrays.
- Write a PHP program to demonstrate following array functions

array_push() , array_shift(), array_search(), array_unshift()

sort(), asort(), ksort(), rsort(), arsort(), krsort()

each(), current(), reset(), end(), next(), pos(), and prev()
shuffle(), array_reverse()

20. Working with functions in PHP

- a) Write a PHP program having a function which take age as parameter and returns "You are restricted" if age is less than 18 otherwise returns "Welcome".
- b) Write a PHP program having a function that takes an array of number as parameter and prints the sum of second largest and smallest elements.
- c) Write a PHP program to demonstrate the function with default arguments.
- d) Write a PHP program to differentiate pass by value and pass by reference in PHP functions.

21. Write a program to demonstrate regular expression in PHP using the functions like

preg_match(), preg_match_all() and *preg_replace()* .

22. Create a form with validation using PHP. The validation errors should be displayed after each field if invalid. Consider following validation rules.

- All fields are required. (name,username,age,password and confirm password)
- Name cannot have numbers and special characters
- Username should be of minimum 8 character and must begin with alphabet
- Age cannot be less than 16 years
- Password and confirm password must match.

23. Working with date and time in PHP.

- a) Write a program to demonstrate the meanings of different formatting options available in *date()* and *time()* functions in PHP.
- b) Write a program to illustrate *mktime()* and *strtotime()* functions in PHP.

24. Handling files in PHP

- a) Write a program to read and write file using *fgetc()* and *fputc()* functions.
- b) Write a program to read and write file using *fread()* and *fwrite()* functions
- c) Write a program to copy the contents of one image file to another. (file copy)
- d) Write a program in PHP which reads a text file and write the contents into another file by replacing the words starting with "T or t" by "HEHE".
- e) WAP in PHP to demonstrate random accessing of file and associated functions.

- f) Create form to take values needed for a bio-data and generate a bio-data in pdf format using PHP.

25. Including and uploading files

- a) Write programs to demonstrate the use of *include()*, *require()*, *include_once()* and *require_once()* functions.
- b) Write a program to demonstrate the file uploading process in PHP.

26. Object oriented programming in PHP

- a) WAP in PHP which should have followings
 - A class with at least three member variables
 - A parameterized constructor having three parameters to initialize the data members
 - A method which displays values of the data members.
 - Three methods with single parameter for each and the method should update the values of data members based on given arguments
 - Two objects of the class
 - Statements for calling of above methods
- b) WAP to demonstrate encapsulation in PHP
- c) WAP to demonstrate single, multi-level and hierarchical inheritance.
- d) WAP to show how constructor of parent class is called from child class
- e) WAP in PHP to demonstrate the concepts of static variable and static methods.
- f) WAP in PHP to demonstrate the concept of method overriding.
- g) WAP in PHP to illustrate the concepts of abstract class.
- h) WAP in PHP to illustrate the concepts of interface
- i) WAP to demonstrate dynamic polymorphism in PHP.
- j) WAP to demonstrate multiple inheritance in PHP using interface.

26. PHP and MySQL

- a) Write a PHP program to insert some data into a table in MySQL using MySQLi procedural approach
- b) Write a PHP program to read all data from a table in MySQL using MySQLi object-oriented approach.
- c) Write a PHP program to update a record of a table in MySQL using PDO approach
- d) Write a PHP program to delete a record from a table in MySQL
- e) Write a PHP program to display the detail of given record (like: record_no, id) from a table in MySQL
- f) Write PHP program to fetch records from two tables in MySQL using subqueries.
- g) Write PHP program to fetch records from two tables in MySQL using SQL joins.

27. Create a CRUD application using PHP and MySQL. [Codes can be printed for this lab no.]
27. Working with session, cookies and email in PHP
- Write a PHP program to demonstrate login and logout features using session. Also include "remember me" feature using cookies in PHP.
 - Write a PHP program to send email.
28. Exception Handling in PHP
- WAP to demonstrate the use of try, catch, throw and finally keywords in PHP
 - WAP to demonstrate multiple catch blocks in PHP
 - WAP to use custom exception handling in PHP.
29. Working with jQuery and jQuery UI
- WAP to illustrate the concepts of jQuery selectors.
 - WAP using jQuery to validate a signup form
 - WAP using jQuery to handle any five different types of events.
 - WAP to demonstrate any five DOM manipulation tasks using jQuery.
 - WAP to hide, unhide and toggle an image using corresponding three buttons using jQuery.
 - Create a web page using following jQuery UIs:

▪ Menu	▪ Slider	▪ Hide
▪ Dialog	▪ Spinner	▪ Effect
▪ Accordion	▪ Draggable	▪ Toggle
▪ Tooltip	▪ Sortable	
▪ Datepicker	▪ Resizable	
30. Working with AJAX
- WAP using AJAX to read the contents of a text file and display on a webpage
 - WAP using AJAX with PHP to work with GET request.
 - WAP using AJAX with PHP to work with POST request.
 - WAP to demonstrate AJAX with jQuery using *ajax()* method.
 - WAP using AJAX, PHP and MySQL to show the records of item selected from dropdown
 - Create a web application to demonstrate "Ajax Live Database Search" using PHP, AJAX, jQuery and MySQL. [Report can be printed for this task]
31. Learning about CMS (report can be printed for this lab work)
- [Students are highly encouraged to try different tools and techniques for customization. They must customize basic things like banner, logos, menu, footer, content text and images. Each student's report should be different. Copying other's task is strictly discouraged]*
- Create an ecommerce website using WordPress by using any theme write the steps involved for customizing looks and features. [use the plugins like WooCommerce]
 - Create a news portal website using Joomla. Write the steps involved for customizing looks and features.
